

JSAN CTS Data Center OpsDesk

Incident lifecycle: from client report to ticket closure

Source of truth: incident-transitions.ts (spec §15)

Generated by Claude Code

LEGEND

Client (self-service portal) Service Desk (triage/close) Engineer (resolves) System (SLA / notifications / audit) Branch / wait state

Backend enforces every transition server-side (role + owner checks) — the UI only renders what GET /incidents/:id/transitions allows.
